

The PACE model

The PACE framework provides a clear foundation and structure for data analysis projects. PACE is an acronym; each one of the letters represents an actionable stage in a project: plan, analyze, construct, and execute.

Plan

The planning stage is where you conceptualize the scope of the project and develop the steps that will guide you through the process of completing a project.

Analyze

The analyzing stage is where you will collect, prepare, and analyze all of the data for your project.

Construct

In the construction stage you will build models that will allow you access to hidden relationships locked within data.

Execute

In the execution stage you will present the finding of your analysis, receive feedback, and make revisions as necessary.
